WHAT IS CLAIMED IS

- An isolated nucleic acid comprising a member selected from the group consisting of:
 - (a) a polynucleotide which encodes a polypeptide of SEQ ID NO:2, 8, 10, 12, 14, 16, 18, 20, or 22;
 - a polynucleotide amplified from a plant nucleic acid library using the primers of SEQ ID NOS: 3 and 4, 5 and 6, 9 and 10, or 11 and 12 or primers determined by using Vector nti Suite, InforMax Version 5.
 - (c) a polynucleotide comprising at least 20 contiguous bases of SEQ ID NO: 1,7,9,11, 13, 15, 17, 19, or 21;
 - (d) a polynucleotide having a plant HAP3-type ccaat-box transcriptional activator, wherein the polynucleotide is from a plant other than *Arabidopsis*;
 - (e) a polynucleotide having at least 60% sequence identity to SEQ ID NO: 1, 9 11, 13, 17, or 21 or 65% sequence identity to SEQ ID NO: 15 or 19 or 70% sequence identity to SEQ ID NO: 7, wherein the % sequence identity is based on the entire sequence and is determined by GAP analysis using Gap Weight of 50 and Length Weight of 3;
 - (f) a polynucleotide comprising at least 25 nucleotides in length which hybridizes under high stringency conditions to a polynucleotide having the sequence set forth in SEQ ID NO: 1, 7, 9, 11, 13, 15, 17, 19, or 21;
 - (g) a polynucleotide containing a conserved region coding the polypeptide of SEQ ID NO: 23, wherein the polynucleotide is from a plant other than *Arabidopsis*;
 - (h) a polynucleotide having the sequence set forth in SEQ ID NO: 1, 7, 9, 11, 13, 15, 17, 19, or 21; and
 - (i) a polynucleotide complementary to a polynucleotide of (a) through (h).

10

5

15

20

25

30

- 2. The isolated nucleic acid of claim 1, wherein the transcriptional activator in (d) is from corn, soybean, wheat, rice, *Veronia*, or *Argemone*.
- The isplated nucleic acid of claim 1 wherein the polynucleotide in (f) is a functional equivalent.
- 4. A vector comprising at least one nucleic acid of claim 1.

5

10

15

20

25

30

5. An expression cassette comprising at least one nucleic acid of claim 1 operably linked to a promoter, wherein the nucleic acid is in sense or antisense orientation.

The expression cassette of claim 5, wherein the nucleic acid is operably linked in antisense orientation to the promoter.

7. A host cell containing at least one expression cassette of claim 5.

8. The host dell of claim 7 that is a plant cell.

9. A transgenic plant comprising at least one expression cassette of claim 5.

The transgenic plant of claim 9, wherein the plant is corn, soybean, sorghum, wheat, rice, alfalfa, sunflower, canola or cotton.

11. A seed from the transgenic plant of claim 9.

12. The seed from the transgenic plant of claim 10.

13. An isolated protein comprising a member selected from the group consisting of:

(a) a polypeptide comprising at least 25 contiguous amino acids of SEQ ID NO: 2, 8, 10, 12, 14, 16, 18, 20, or 22;

			(b) \ a polypeptide which is a LEC1 transcriptional activator containing
			the conserved motifs of SEQ ID NO: 23, wherein the polypeptide is
			from a plant other than <i>Arabidopsis</i> ;
			(c) a polypeptide comprising at least 60% sequence identity to SEQ ID
	5		NO. 2, 12, 14, 16, 20, or 22 or 70 % sequence identity to SEQ ID NO:
			8, 10, or 18, wherein the % sequence identity is based on the entire
			sequence and is determined by GAP analysis using Gap Weight of 12
			and Length Weight of 4;
			(d) a polypeptide encoded by a nucleic acid of claim 1;
	10		(e) a polypeptide encoded by a nucleic acid of SEQ ID NO: 1, 7, 9, 11,
			13, 15, 17, 19,\or 21; and
			(f) a polypeptide having the sequence set forth in SEQ ID NO: 2, 8, 10,
j			12, 14, 16, 18, 20 or 22.
: 45	15	14.	The protein of claim 13, wherein the transcriptional activator of (b) is a
			LEC1 protein from corn, soybeans, wheat, rice, Veronia, or Argemone.
ib)	>	45	
A .		15.	A ribonucleic acid sequence encoding a protein of claim 13.
11	20	% 6	A method for modulating LEGA and the
			A method for modulating LEC1 activity in a plant, comprising: (a) transforming a plant cell with at least one expression cascatte of
C	ومل ا	,	(a) transforming a plant cell with at least one expression cassette of claim 5 and
			(b) regenerating a transformed plant that expresses the at least one
	25		nucleic acid in an amount sufficient to modulate LEC1 activity in the plant.
			piant.
		17.	The method of claim 16, wherein the plant is corn, soybean, sorghum,
			wheat, rice, alfaka, sunflower, canola or cotton.
			, and the same of collott.
	30	18.	The method of claim 16, wherein LEC1 activity is increased.

The method of claim 16, wherein LEC1 activity is decreased.

19.

5

- A method for transiently modulating the level of LEC1 activity in plant cells comprising introducing at least one nucleic acid of claim 1.
- 21. The method of claim 20 wherein the at least one nucleic acid is a ribonucleic acid.
- 22. A method for transiently modulating the level of LEC1 activity in plant cells comprising introducing at least one polypeptide of claim 13.
- 10 23. A method for enhancing tissue culture response in a plant cell comprising introducing into the plant cell at least one LEC1 polypeptide or at least one LEC1 polynucleotide under conditions sufficient to enhance tissue culture response.
- 15 24. The method of claim 23 wherein the plant cell is transformed with at least one LEC1 polynucleotide.
 - 25. The method of claim 23 wherein at least one polynucleotide is operably linked to a promoter driving expression in the plant cell and growing the plant cell.
 - 26. The method of claim 23 wherein the plant cell is a recalcitrant cell.

77CFR 2728.

20

The method of claim 26 wherein the plant cells an inbred plant cell.

Amethod for inducing somatic embryogenesis in a plant cell comprising introducing into a responsive plant cell at least one LEC1 polypeptide or at least one LEC1 polynucleotide, wherein the responsive plant cell is transformed and grown under conditions sufficient to stimulate the production of a transformed embryo and wherein the plant cell is attact to

30

production of a transformed embryo and wherein the plant cell is other than an *Arabidopsis* cell.

The method of claim 29 wherein the plant cell is transformed with at least one LECT polynucleotide. 30 the method of claim 30 wherein at least one polynucleotide is operably 31. linked to a promoter driving expression in the plant cell. 5 The method of claim 29 further comprising growing the transformed embryo under plant growing conditions to produce a regenerated plant. The method of claim 26 wherein the plant cell is from corn, soybean, sorghum, wheat, rice, alfalfa, sunflower, canola or cotton. A plant produced by the method of claim 26. method for positive selection of a transformed cell comprising introducing into a responsive plant cell at least one LEC1 polynucleotide or at least one LEC polypeptide and growing the transformed plant cell, wherein the responsive plant cell is transformed and grown under conditions sufficient to induce embryogenesis to provide a positive selection means. 20 The method of daim 35 wherein the plant cell is transformed with at least one polynucleotide The method of claim 36 wherein at least one polynucleotide is operably linked to a promoter driving expression in a plant. 25 37. The method of claim 35 further comprising altering media components to favor the growth of transformed plant cells. 30 The method of claim 35 wherein the media components are altered to reduce somatic embryogenesis in non-transformed cells. The method of claim 3/7 wherein the polynucleotide is excised. -69-

The method of claim 40 wherein the polynucleotide is flanked by FRT sequences to allow FLP mediated excision of the polynucleotide. 41 A method for inducing apomixis in a plant cell comprising introducing into a 42. responsive plant cell at least one LEC1 polypeptide or at least one LEC1 polynψcleotide and growing the plant cell, wherein the introducing and growing is done under conditions sufficient to produce a transformed somatic embryd The method of claim 42 wherein the plant cell is transformed with at least one LEC1 polynucleotide. The method of claim 45 wherein the at least one polynucleotide is operably linked to a promoter driving expression in a plant cell The method of claim 42 further comprising suppressing in the plant cell the expression of an FIE polycomb polynucleotide using sense or antisense methods. The method of claim 42 further comprising growing the embryo under plant growing conditions to produce a regenerated plant. The method of claim 43 wherein the promoter is an inducible promoter.

25

The method of claim 43 wherein the at least one polynucleotide is expressed in integument or nucellus tissue.

48 49.

A plant produced by the method of claim 42.

30 **5**6.

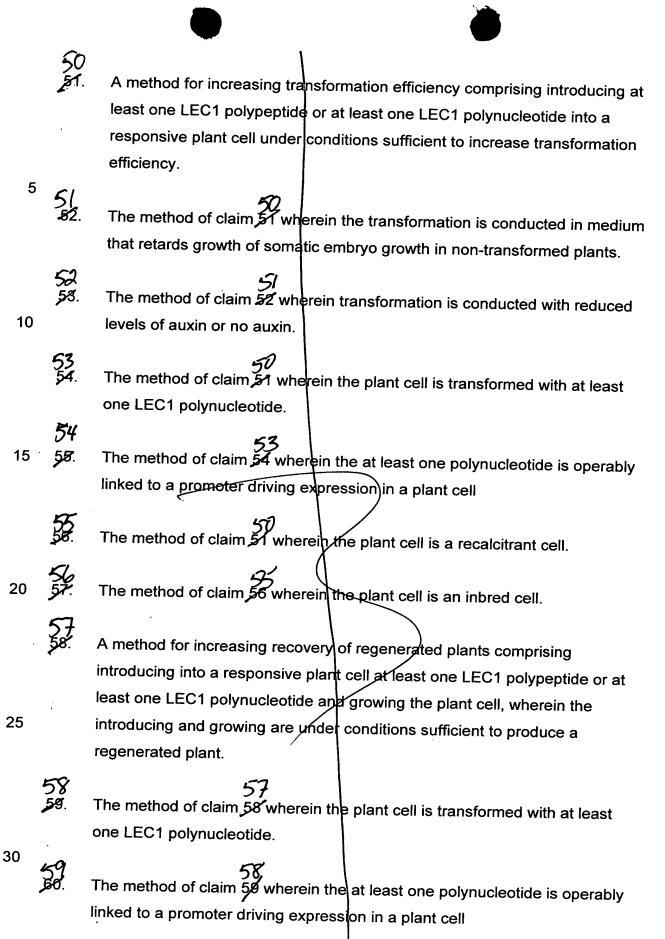

5

10

15

20

The plant of claim 49, wherein the plant is male sterile.

U)
@ 1	

The method of claim 58 wherein the plant cell is a recalcitrant cell.

61.

The method of claim 61 wherein the plant cell is an inbred plant cell.
